The controller/transformer pack contained in this train set conform to the new Australian standards and requirements as of Jan 2016. The unit is made to run the train set but any additional load, over load or short will cause the unit to switch off. If the unit is exposed to a continued overload or short it may fail and be damaged.

The track used in these train sets is quality Atlas H0 Code 100 Nickel-Silver track. Extra track as well as points, curves and flexitrack is available by request or from your any good model and hobby shop.
